EDUCATION

University of Exeter

Exeter

BSc Computer Science with a year in Industry

Sep. 2024 – Jul. 2028

- Predicted 1st Class degree
- Key modules in C Family, Cybersecurity and Machine Learning
- Played for the University Hockey Club 1st team, winning promotion into the English Premier League

Loughborough College

Loughborough

Diploma in Sporting Excellence

Sep. 2022 – Jul. 2024

- Achieved a pass in a program dedicated to improving athlete employability

Tadcaster Grammar School

York

A. Levels, GCSEs

Sep. 2017 – Jul. 2024

- Computer Science (A), Maths (A) and Physics (B) A. Levels
- 11 GCESs including English Language (7), Maths (8) and Computer Science (9)

EXPERIENCE

Amulet Hotkey

Newton Abbot

Software Engineer

Jun. 2026 – Present

- Part of a biweekly sprint driven team developing firmware and software for Corestation HX
- Led a project to improve vulnerability awareness and meet upcoming CRA regulations by identifying and fixing vulnerabilities in external packages through a new vulnerability management service built into CI/CD
- Improved testing efforts by building low level device emulators to simulate faults within components and assert software responses

Cyberus CyberSecurity Conference

Lorient, France

University Representative

Jun. 2026 – Present

- Competed against students around the world in a CTF focused on embedded systems
- Gained insight into the world of cybersecurity through multiple lectures from industry leading experts
- Lectures included post quantum cryptography, regulatory cybersecurity, generative AI cybersecurity and cybersecurity for critical embedded systems

PROJECTS

Fixr-bot | *Python, Unicorn, FastAPI, Playwright, Javascript*

Jan. 2023 – Present

- Built a playwright engine supporting multiple instances through python's asynchronous API, using a queue to stack consecutive jobs, served by a FastAPI web API with a simple static frontend
- Learnt to create resilient infrastructure using intelligent retries, backoffs and logging to ensure a greater success ratio

Project Ate | *Python, Django, PostgreSQL, React, JSX, Docker*

Sep. 2021 – May 2022

- Led a team of 7 in a university group project creating a food waste solution
- Created a full stack market app supporting multiple food retailers and customers, with integrated analytics, price prediction and a gameification layer
- Developed leadership skills within a group setting, prioritising work items within sprints and motivating others

AHK Vulnerability Service | *Python, Django, PostgreSQL, React, JSX, Docker*

Sep. 2021 – May 2022

- Expanded CI/CD pipeline capability by integrating version aware SBOM generation
- Hashed firmware packages with SBOM reports to develop a provable audit trail built on provenance, meeting CRA guidelines

TECHNICAL SKILLS

Languages: Python, C, Java, Javascript, C++, Rust, SQL

Frameworks: Django, FastAPI, React, Zephyr, Yocto

Tools: Git, Docker, PostgreSQL, SQLite

Automation: Building CI/CD pipelines with automated building, versioning and testing within Bitbucket workflows

AI: Building and using agentic workflows for automation and productivity
